## Abstract

Human with stable, hazardless and unblemished body structure is truly exemplary forever in the history of “Health Care”. But the most undeniable fact is that, people cannot survive due to their multifarious physical deformities at every now and then. So it is not desirable at all for the society. Because it should be absolutely unblemished in nature. As a result all the social leaders will be generating their additional spark of confidence to bring out the most prestigious cultural synthesis which might be thought provoking not only for their very sound health but for the historic boulevard of health care in a befitting manner. All the medical doctors will be undoubtedly motivated and they will be having the best spirit to instigate the root of rapid health care management, where both the exemplary treatments and the sound commercial image are absolutely sustainable in deed. That is how the concept of health care management may survive in all over the globe. Most importantly all the countries must be maintaining the same equation to alive their health care discipline. Because patients do ask for certain treatments along with the exclusive entertainments in a specific and most reasonable package. So that they shall be more interested to move from India for the refined treatments under the memorable leadership of world renowned doctors and their sublime sketch of treatments. It is needless to convey that, all the doctors and the overseas hospitals do have the global influence from the perspective of high-end scholarly education, supreme leverage of Technology and the vivid scientific discovery. That is why both “Medical Tourism” and the concept of “Best Healthcare Management” have equally been the most riveting research focus in across the globe right at this moment and it shall definitely be the lively substitute to increase the rate of collective wellness undoubtedly in the hammering future.

**Keywords:** Impact of medical tourism; Paradigm of healthcare management; Impact of healthcare research; Role of medical leaders

## Introduction

The scenario of present day movements is absolutely very tricky and that is the reason why most of the leaders have emphasized upon medical tourism without any second thought. Now the fact is the concept of medical tourism should immediately be really enriched and accepted in all the individual hospitals, nursing homes and all the medical colleges’ right from the very beginning. On the other hands, medical leaders have realized the worthwhile impacts of pharmacy and medicines which are undoubtedly important during their sudden medical tours not only for the amicable treatments but to reduce the invariable anxiety at the same point of time. All the patients so have the worry and

various uncertainties in their lives. Nevertheless they firmly need to get their crucial treatments where they are definitely concerned about the expenditure and the quick betterment of life. That is why the concept of medical tourism along with the most stable supply of medicine should absolutely very impressive to satisfy doctors to move for the worthy treatments and it is really very blissful for the patients to initiate their life once again with the exclusive aspirations to fulfil within a very short span of time. The hospital management has incorporated this fascinating path way exclusively for the patients along with their very worried families. So it should definitely be taken care of and both medical doctors and leaders shall have to join their hands together to bring

out the remarkable peace and communal harmony through initiating this system to inspire all of us.

In the same light, all the prescribed clinics and the medicines do invariably reduce the stress of our patients and all the pharmacists try to stop from spreading the same in human bodies. On the contrary these medicines are absolutely worthwhile to save them from any environmental risks as well. This is how they do balance the situation and the multifarious risks of life through their acquired exposures and the never ending professional philosophies.

That is why medical tourism consists the following:

- **Popular Concept:** The concept of “Medical Tourism” shall have to be absolutely very popular and enlarged in all over the globe. Because plenty of people are losing their very precious span of life due to some unavoidable treatments indeed. So global leaders are taking the inhabitable initiatives to disseminate the impacts of this system in across the globe and it becomes gradually very successful in the end. Most importantly each nation shall have to rescue the entire human kind though the best hospitality and their agreeable constitution in style. As a result each patient can have the partial relief and their most significant medical safety at the same point of time. It must be globally appreciated both from the perspectives of leaders and strategy makers in all over the globe without any fail. It should be the utmost strength and all the pharmacists shall have to co-ordinate with them to supply the needful medicines and the unconditional care in a very conforming manner. According to my perception the entire world is just beyond the system and plenty of mismanagements are here. That is why patients are quite hopeless and they do not know even about their most pivotal decisions regarding their treatments.
- **Proper Medical Treatment:** All the hospitals, nursing homes and medical hubs shall have to initiate the best treatments for their patients. The concept is people are in massive crises in all the regards and that is the reason why they cannot disclose all the perspectives at the same point of time. But the ultimate target is to have the most anticipated relief in their lives. According to the present day scenario both medical doctors and leaders have been asking for various professional trainings and the appropriate implications of the same. That is how these wonderful medical treatments are being successfully processed and concretely delivered to all our needful patients. So treatments means the indispensable care and the exclusive analysis of their problems otherwise it shall not be possible to prevent their problems at all. Both detection and prevention must have the best interconnection with each and other. As a result all the doctors will be able to find out the best medical

treatments along with the great refinement of painstaking attitude in the end.

- **Global Medical Hub:** It is indeed very important to accommodate various problems and physical difficulties at the same time. So all the medical leaders are very concerned about their destined good will and that is why they try to establish a number of hospitals, nursing homes, medical clinics in the same area or territory. So all the advantages are available there including the best supply of medicines as per the huge demands in across the globe. That is how the global medical hub is undoubtedly possible, where right from leaders to pharmacists should be in a same position to perform and contribute for the most wanted medical welfare. Most notably all the pharmacists shall have to ply the sheet anchor role out here and it is absolutely inhabitable in nature. The fact is that pharmacists should be cooperating through different day-today services through medicines and the navigation of eminence at the end of the day. Because a hospital is having a number of departments and which is the best department for which patient it is really very conducive to know for each family. As a matter of the fact they will be immediately able to go to the concerned departments and doctors. They shall have the correct treatments accordingly. Otherwise the mismanagement will be taking place and patients must have to suffer indeed.
- **New Life:** It is simply needless to convey you that, patients must have the exemplary treatments even outside their state and nation. Because they shall have think of the quality treatments, reasonable investments, best cooperation from hospitals and most notably the real assurance of their gradual betterment. That is how they may initiate the new life with prosperity and on the other hand, rate of fitness will be really higher within a very short while. In this regard medical doctors shall have to refine the credence of medical tourism and their most eminent medical team indeed. They are the prime resources, who will be really penetrating all the hospital authorities to bring out the very sound administrators, who will be dealing with the different occupational contexts in a conforming manner.

Paul Steiner has significantly expressed his views in one of the published articles entitled: Investment in health technologies calls for lessons to be learned (2014) that our health care industry has been moved very slowly to ensure their communications and collaborations for driving the same in all over the globe. It has been the most significant governmental issues for the utmost relief of our patients.

## Prime Objectives

The entire health care management system is having some unparalleled objectives to reach and that is the most legitimate occupational proceedings from the perspective of both medical doctors and leaders not only to provide the best care but to refine the needful societal thrust at all. Most importantly leaders try to elevate the system of medical tourism and the unbeaten existence of medical clinics respectively. Therefore all the leaders are very specific to research a lot just upon the same and to find out the most applicable roots at the same time. So both leaders and pharmacists shall have to be properly engaged to entrench the equation of “Travel Medicine” very comprehensively.

That is the reason why the entire system needs the following:

- **Painstaking Hospitality:** It has the far reaching mileage along with both national and international effects. It means the most significant care and they will be definitely creating an unconditional bonding in between their unavoidable patients and themselves. In this regard the entire medical team shall gladly receive their patients for the better treatments in a befitting manner. That is the reason why they have to be well trained and very committed in nature. So they shall have to entertain their patients’ right from the very beginning. It is the easier process for the patients to be absolutely free to disclose their respective difficulties. As a result an astounding professional bonding will be taking place and all the problems will be undoubtedly solved by their mutually exclusive communications.
- **Social Change:** All the medical doctors do focus upon the social change by increasing the rate of fitness in style. That is why they need the most refined care with best educational absolution. So they do acquire the needful education and the enriching formation of a team. All the team members will have to be really upstanding and absolutely prompt to understand about the modern health care system and the inhabitable prospect of the same from the perspective of medical tourism. Most notably all the legitimate procedures shall have to be exclusively evaluated by the leaders for rapid betterments indeed. As a result the consequence of our society will be absolutely very high and refined. Moreover our medical team will be purely charged to take the very special care of our patients and they shall be able to recommend them in some other hospitals in both national and international stature as per the absolute requirements.
- **Medical Facility:** It means the speed of life and patients shall have to avail the same from each hospital right from the date of their admission. On the other hand, patients shall have to search for substitutes in terms of better treatments, reasonable expenditures, billing facility, different concessions according to their different ages. So it is an astounding system and all the medical leaders shall have to

emphasize upon the same not only for their self-advancements but for the unblemished communal glory in the end.

- **Global Change:** It needs the collective awareness and the best communal understanding between leaders and their immediate followers. Now the fat is that all the leaders shall have to frame an exclusive forum to do the most extensive research about the wide-ranging well fare of their patients who have been suffering from different diseases for last few years. So they shall have to have the strong constitution. They shall have to train their followers, who will be really working hard to look after all the patients along with their various needs. This is how they shall have brought out the absolute changes for global luminosity.

Stephen L. Walston, Chirstina Juris Bennett and Abeer Al-Harbi have told their collective introspections in one of the published articles entitled: Understanding the factors affecting employees’ perceived benefits of healthcare information technology(2014) that, healthcare technology is one of the most imperative tools to enhance the unique treatments in both national and international standings. As a result both efficiency and quality may increase in this unstoppable medical history. So both doctors and leaders are really very conscious in this regard. Medical tourism is having the most infinite significance right from the implementation to execution. Because this concept of “Medical Tourism” is already established but all the formal proceedings are yet to be finalized. That is the reason why the global paradigm has been made in a different dimension. Most importantly a group of hospitals is being interlinked with each and other to maintain the flow of their unstoppable health care according to the needs. Therefore they shall have to abide by certain rules indeed.

- **Economic Standing:** Hospital authority shall have to think about the socio economic stature of all the individual patients. Hospitals shall have to help them to effort the entire operation cost and that should be bare minimum. So the concept of medical tourism will be definitely flourished in all over the globe and patients from each class will be able to avail the opportunities for their inhabitable betterments of life.
- **Better Treatment:** It means the high-end performance of our global medical community. Because everybody knows that it is really essential to provide their suffered patients and they shall have to take their cares with zeal right from the date of admission. In case that is not possible they do have the every right to refer them in somewhere else. In this regard the scale of treatment shall definitely be evaluated by the experts.
- **Advancement of Technology:** India is a developing country but the splendor of informational technology has been really established out here. Most importantly each medical doctors and medical leaders are largely depending upon these prompt

advancements of technology. Because the procedure of treatment is not so easy and most notably each human life is absolutely very precious and invaluable respectively. Therefore technology shall easily influence our lives and our collective destiny as well. Doctors are trying to implement the most useful technological tools and they are providing the best medical treatments at the same point of time. The mechanism of our technology is really very high and very trust worthy as well. Most importantly the entire treatment might be completed within a very short while. Therefore each country is emphasizing hard upon the global technological implementations for the patients in all over the globe. According to the statistics patients are continuously going to some other countries for the better treatments, where all the highly influential technology is regulated by the doctors for refining treatments.

- **Global Connection:** It has the far reaching occupational magnificence at all. That is the reason why doctors and the medical leaders continuously try to enhance their global network as much as possible. Because different global associations, suggestions, recommendations, feed backs of various technological tools will be in their notions and they shall proceed accordingly. Patients may take their global resources for their most desired treatments in the end. That is why each hospital needs to be globally connected from the perspective of different resourceful doctors and global pharmacists immediately.

Michelle Sara Monachino and Paulo Moreira have shared their most invaluable thoughts in one of the published articles entitled: Corporate Social Responsibility and health promotion debate: An International Review on the potential role of corporations (2014) that, health promotion has refined the dimension of corporate social responsibility and it is in a position for concerning by different medical corporations at all.

## Needful Measurement

It is simply needless to state that all the veteran medical leaders are trying to substantiate the concept of “Medical Tourism” along with the best pharmaceutical wings in across the globe. That is the great step right now to satisfy our each of the families very comprehensively. Most importantly all the leaders have been absolutely concerned about the inhabitable welfare of our patients in style. That is why they have decided to draw some certain measurements which are as follows:

- **Sound Environmental Support:** It is an astounding path way to have the societal influence in the end. It means each one of us shall have to understand this most unique initiative of human treatments and the most advantageous part is all the patients shall be able to roam around the world for their most needful treatments, which are absolutely reasonable in nature.

On the other hand, patients shall have the different environment along with the relishing culture outside India. It is one of the definite positivity and that shall have to be implemented very soon to bring out the new life for our patients at all. As a result we shall have the sound environment along with the absolute energy and that shall definitely boost up their families from the perspective of additional confidence generation in this most competitive globe to sustain indeed.

- **Competence of Doctors:** Our medical doctors shall have to be absolutely very confident and really upstanding not only for their self-enrichment but to substantiate the great societal peace at the end. Everybody should have the best treatment along with the long lasting life for infinite prosperity. That is how the unavoidable societal resilience can be easily solved indeed.
- **Cultural Refinements:** Medical tourism is such unparalleled concept, where each patient can have the featured culture in style and it shall definitely be very refining for all of them to cherish the same for their collective sustainable developments. It is a universal truth already. Because outside India means different environ and different culture and these are absolutely very hygienic for each one of them to stay alive and they shall be into the various activities at the same time. So culture plays the sheet anchor role not only for the suffered patients but for the medical leaders as well. Medical tourism provides the invariable scopes to those leaders to refine their psychology and the best stand of mind.
- **Overall Relief:** It is really required right now and it is going to bring out the unending satisfactions at all. As a matter of the fact all the patients will be undoubtedly released from their massive physical discrepancies by the best occupational hypothesis of our eminent medical doctors in a very befitting manner. That is why the concept of medical tourism is otherworldly in all the regards. Overall relief means different chapter, different climax of life and these are really exemplary for the hopeful patients to restyle their very precious journey of life already.

Richard Smith, Melisa Martinez Alvarez and Rupa Chanda have shared their most precious introspections in one of the published articles entitled: Medical Tourism: A review of the literature and analysis of a role for bi-lateral trade(2011) that, many countries are being absolutely influenced to accept the system of “Medical Tourism” by cross border movements of patients.

## Professional Observations

It is another most impactful issue and it shall strike our medical leaders and doctors to reach the best occupational goal within a

very short while. Because the commercial involvement and its utmost benefit are really magnetic and compelling for a hospital after the end of its multifarious functions. That is why leaders are very alert to get involved in their most noble scientific paradigm for the vivid well fare of their patients and to generate the sound commercial revenues at the same point of time. So they do take some of the pivotal parameters for the same which are as follows:

- **Commercial feed back:** It is indeed very important and all the doctors try to provide the best professional services along with their indispensable cares to gain the solid revenue, which is undoubtedly an illuminating avenue for their great job satisfaction and to enrich their global position as well. That is the reason why they do deserve for their undeniable commercial outputs not only for their own selves but for the entire family for ensuring the both bread and butter with broad satisfaction.
- **Entertainment:** It has the endurable effects upon the community of medical doctors because they all have to entertain their patients and their uncontrollable problems indeed. On the other hand, all the patients shall have to have the old rhythm of life within a very short while. That is the reason why both doctors and the leaders do support the same equally and the notion of entertainment should really be at front as well.
- **Job satisfaction:** It is really endless in nature. The concept of job satisfaction has already been increased by implementing the global perception of “Medical Tourism”. Most importantly each medical doctors and medical leaders do need the same without any second thought. It should definitely be absolutely spirited from the perspective of doctors and their competent contributions indeed.
- **Perpetual motivation:** This is really spirited for all the enlisted patients to get motivated along with the most advancing treatments to generate their most exciting span of life indeed. Thereby all the medical doctors are the best sheet anchors and they do have the most prestigious stand of contributions specially through the overweening concept of “Medical Tourism” right from the very beginning.

Soonae Hwang, Donhee Lee and Chang-Yuil Kang have elucidated their brilliant thoughts in one of the published articles entitled: Medical tourism: focusing on patients’, prior, current and post experience (2018) that, this exclusive study properly examines the medical tourists’ experience after the end of their detailed treatments. It is really very significant from the perspective of successful hospital management and the long-lived image of our each patient as well.

## Conclusion

Medical tourism is the most long-lasting measure from the end of global medical science and their histrionic scientific discoveries. As a result the global family will definitely be reconstructed by our societal and academic leaders for the ceaseless communal victory and it is especially for all the patients to adopt the imperial earth with versatile cultural fluorescence forever.
